

PVC Series

PVC slatwall is strong and durable. With its lightweight nature, PVC slatwall is easy to handle and install. PVC Series is water and moisture resistant, making it ideal for a variety of environments, such as outdoor retail kiosks, specialty framed wall fixtures, and garages. Using standard slatwall accessories makes display, organization, and storage easy.

Eight foot long sections (12"H x 96"L) weigh only seven pounds and deliver an amazing 70 pounds of breakout strength. Sections fit together vertically via a panel connection lip for seamless and unlimited stacking (see illustration on reverse side). For an aesthetically striking project, eight foot length, "L" shaped optional color matching edge treatments are available. White panels and edge treatments can be custom painted to capture that special look.

Installation

Installation instructions are available upon request.
